

Testing Verilog on the CATBOARD on RPi Zero with CATBOARD 07/18/18

A Pizero with CATBOARD FPGA. The CATBOARD provides 2 PMOD connector and a 20 pin with 3.3 v & Grd and 18 I/Os.

ICOBARD RPI

CATBOARD RPI

GPIO

GPIO1
RPI_GPIO

Using a Pizero to program the FPGA.

Most of Verilog was written by Dan Gisselquist, Ph.D. from Gisselquist Technology, LLC. He is working with the ICOBARD which is a HX8K Lattice FPGA like the CATBOARD. The Verilog and C++ software is found at

URL: <https://github.com/develone/catzip.git>

```

```

In the catzip/rtl/pptest **make** creates **hellopp.bin**, **linepp.bin**, and **speechpp.bin** using yosys, arachne-pnr and icepack.

In the speechpp.pcf set_io i_clk R9. Pin R9 on the icoboard ICE_CLK is connected to IOB_81_GBIN5 on the right side of the image below.

Trying to chg set_io i_clk R9 # 100 MHz clock
 To C8 USER_CLK was causing the following error
 fatal error: bad constraint on 'i_clk': no PLL at pin C8

Post on #yosys

Pin C8 is my USER_CLK comes from a 100MHz osc. It is connected to IOT_197_GBIN1 on HX8K. When I try using it for as an input to PLL I get the fatal error: bad constraint on 'i_clk': no PLL at pin C8.

Can only certain pins be used as inputs to PLL?

daveshah

develonepi3: use the SB_PLL40_CORE instead of SB_PLL40_PAD variant (and REFERENCECLK in instead of PACKAGEPIN)

on the left side of the image below.

The version of speechpp.bin uses a PPL to reduce the 100MHz Oscillator down to 66MHz.

```

wire   clk_66mhz, pll_locked;
SB_PLL40_CORE #(
    .FEEDBACK_PATH("SIMPLE"),
    .DELAY_ADJUSTMENT_MODE_FEEDBACK("FIXED"),
    .DELAY_ADJUSTMENT_MODE_RELATIVE("FIXED"),
    .PLLOUT_SELECT("GENCLK"),
    .FDA_FEEDBACK(4'b1111),
    .FDA_RELATIVE(4'b1111),
    .DIVR(4'd8),           // Divide by (DIVR+1)
    .DIVQ(3'd4),           // Divide by 2^(DIVQ)
    .DIVF(7'd94),         // Multiply by (DIVF+1)
    .FILTER_RANGE(3'b001)
) pli (
    .REFERENCECLK (i_clk    ),
    .PLLOUTCORE   (clk_66mhz ),
    .LOCK         (pll_locked ),

```

```

        .BYPASS      (1'b0      ),
        .RESETB      (1'b1      )
    );
    assign s_clk = clk_66mhz;

```

The ICOBOARD used ***SB_PLL40_PAD*** since a different ***GBIN*** was used,

Running “***arm-netpport***” on pizero-1 which receives the data from the FPGA in parallel using 11 gpio pins

Maps pins on FPGA to Pins on Rpi. These pins were different on the ICOBOARD.

```
set_io i_clk    C8
```

```
set_io o_ledg[0] A9
```

```
set_io o_ledg[1] B8
```

```
set_io o_ledr   B7
```

```
set_io i_pp_dir  R3
```

```
set_io i_pp_clk  T8
```

```
set_io io_pp_data[0] R4
```

```
set_io io_pp_data[1] T3
```

```
set_io io_pp_data[2] T13
```

```
set_io io_pp_data[3] T6
```

```
set_io io_pp_data[4] T5
```

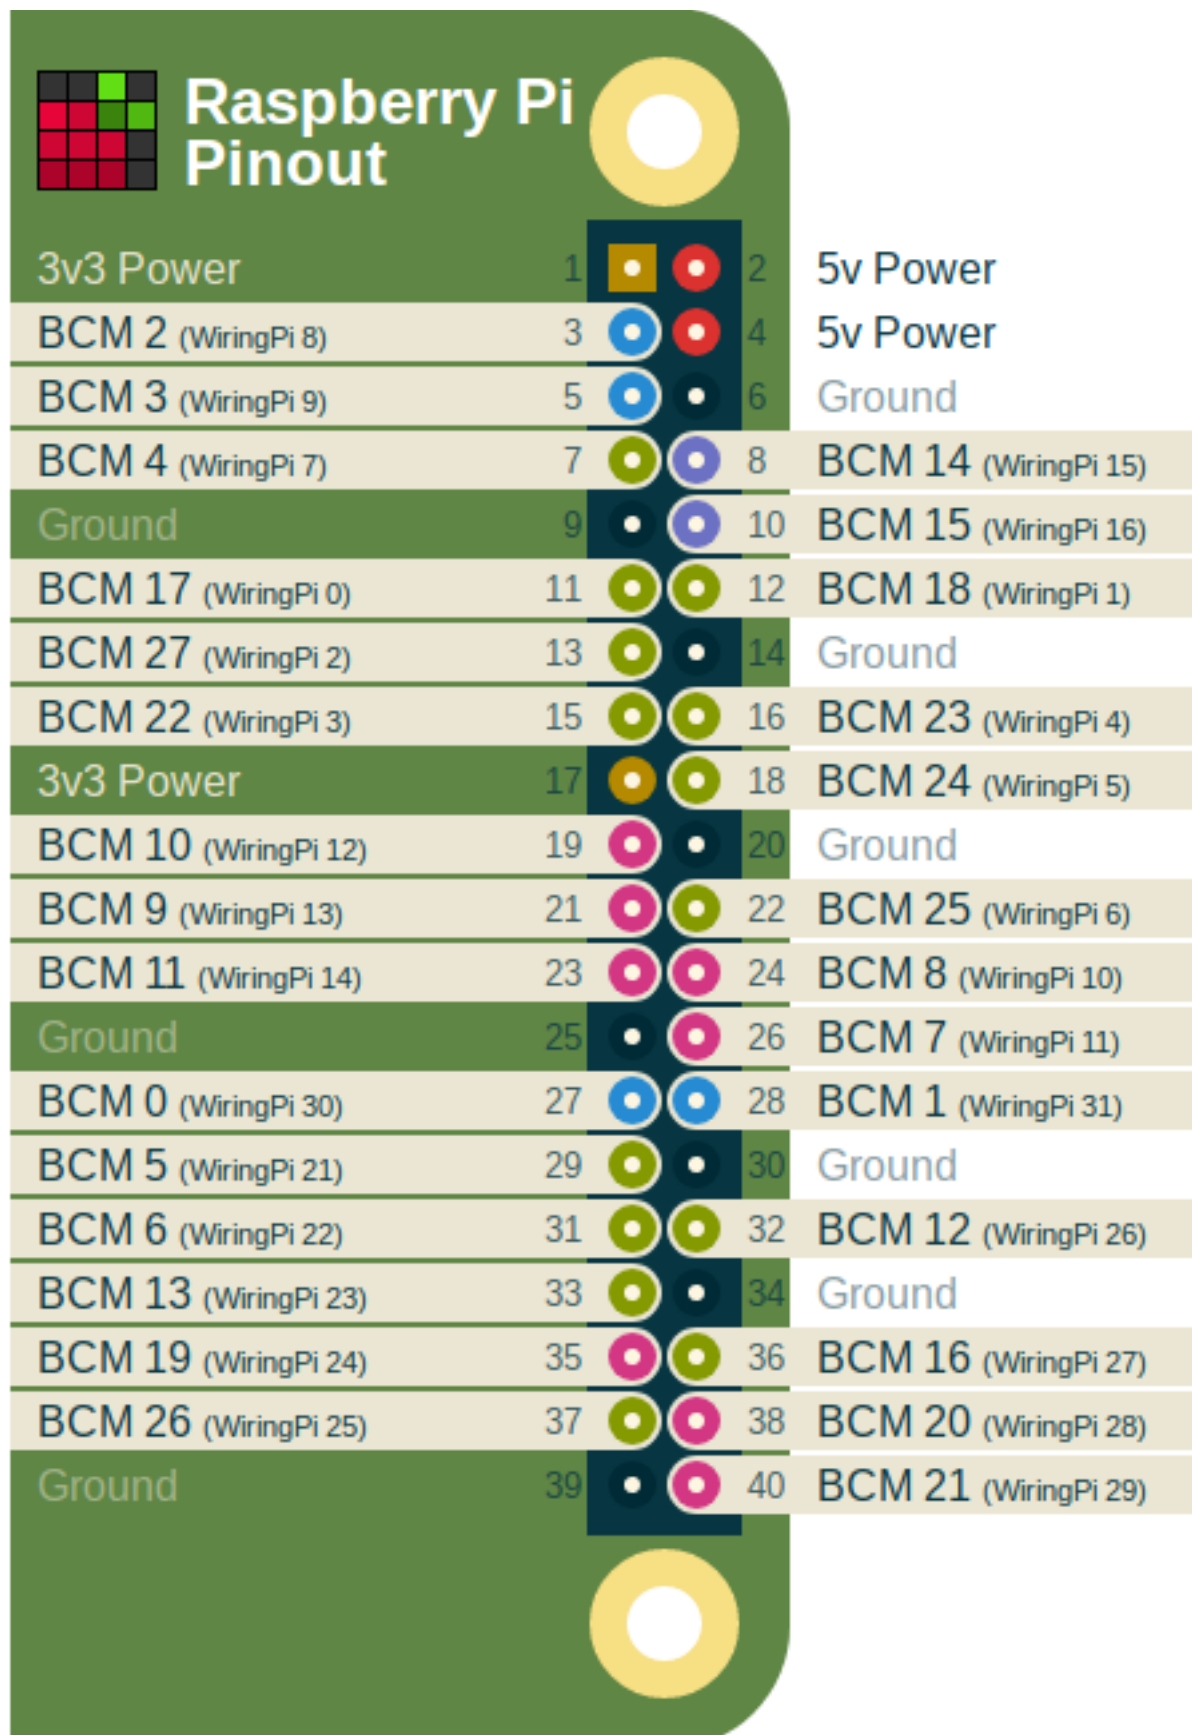

```
set_io io_pp_data[5] P9
```

```
set_io io_pp_data[6] T9
```

```
set_io io_pp_data[7] T11
```

```
set_io o_pp_clkfb T7
```

The code for netpport.cpp uses witingPi.

To create the executable

To create ***arm-netpport & arm-wbregs*** ~/catzip/sw/host or ~/icozip/sw/host and type ***make***.

```
# define RASPI_DIR 28 //BCM20 PIN 38, GPIO.28 IOB_59 R3
# define RASPI_CLK 10 //BCM8 PIN 24, GPIO.10, IOB_75 T8

# define RASPI_D0 27 //BCM16 PIN 36, GPIO.27, IOB_63 R4
# define RASPI_D1 24 //BCM19 PIN 35, GPIO.24, IOB_61 T3
# define RASPI_D2 0 //BCM17 PIN 11, GPIO.0,IOB_94 T13

# define RASPI_D3 21 //BCM5 PIN 29,GPIO.21 ,IOB_73 T6

# define RASPI_D4 22 //BCM6 PIN 31,GPIO.22 ,IOB_69 T5
# define RASPI_D5 4 //BCM23 PIN 16,GPIO.4, IOB_83 P9

# define RASPI_D6 5 //BCM24 PIN 18, GPIO.5, IOB_79 T9
# define RASPI_D7 1 //BCM18 pin 12, GPIO.1, IOB_89 T11
# define RASPI_D8 11 //BCM7 PIN 26, GPIO.11, IOB_75 T7

#define READ_FROM_ICO 0
```

#define WRITE_TO_ICO 1

The file “*speech.hex*” is read by the FPGA and sent to the pizero.

```

. |=====|
. |
. | Four score and seven years ago our fathers brought forth on this
. | continent, a new nation, conceived in Liberty, and dedicated to
. | the proposition that all men are created equal.
. |
. | Now we are engaged in a great civil war, testing whether that
. | nation, or any nation so conceived and so dedicated, can long
. | endure. We are met on a great battle-field of that war. We have
. | come to dedicate a portion of that field, as a final resting
. | place for those who here gave their lives that that nation might
. | live. It is altogether fitting and proper that we should do this.
. |
. | But, in a larger sense, we can not dedicate-we can not consecrate-
. | we can not hallow-this ground. The brave men, living and dead,
. | who struggled here, have consecrated it, far above our poor power
. | to add or detract. The world will little note, nor long remember
. | what we say here, but it can never forget what they did here. It
. | is for us the living, rather, to be dedicated here to the
. | unfinished work which they who fought here have thus far so nobly
. | advanced. It is rather for us to be here dedicated to the great
. | task remaining before us-that from these honored dead we take
. | increased devotion to that cause for which they gave the last
. | full measure of devotion-that we here highly resolve that these
. | dead shall not have died in vain-that this nation, under God,
. | shall have a new birth of freedom-and that government of the
. | people, by the people, for the people, shall not perish from the
. | earth.
. |
. |
. |=====|
. |
```

In addition, a remote host, using telnet can receive the data being sent from the FPGA. The command “*telnet pizero-1 8364*”

```
pi@pi3-2:~/uart_rxtx/wbuart32/ppptest $ telnet pizero-1 8364
